

MARTIN·LOGAN
the electrostatic loudspeaker technology co.

the **MARTIN-LOGAN C.L.S.**TM
full range electrostatic transducer

the essence of electrostatic design culminates in the Martin-Logan C.L.S.

Our award winning CURVILINEAR LINE SOURCETM technology allows smooth unencumbered dispersion of sound throughout the listening area. The result, perfectly etched imaging and focus are achieved through minimal room interaction and optimum natural reproduction of sound.

For thirty years, Electrostatic technology has been accepted as the ultimate for resolution and clarity in sound reproduction. Martin-Logan has developed the first practical application of this technology (patent pending) into a system that delivers full level response from a single transducer, operates reliably in open air use, is compatible with any system, and presents seamless dispersion of precise sound to your listening environments.

System Specifications

Frequency Response	45-22,000 Hz \pm 2 dB
Dispersion	Horizontal-30 degrees Vertical-5' line source
Sensitivity	88 dB 1 watt / 1 meter
Power Handling	120 watts per channel
Impedance	Nominal-6 ohms
Weight	55 pounds / each
Size	2' 4" wide x 5' tall x 3" deep
