setup for Android users

1. Download the free DTS Play-Fi app from Google Play or the Apple App Store.
2. If using a wifi connection, for optimal setup conditions place your wireless product next to your wireless router. The wireless product can be moved to its final location after wifi setup.
3. If using a wifi connection, plug your wireless product into an electrical outlet and press the Power button. The wifi indicator LED will start blinking for 20 seconds while your wireless product boots up. This is the first time your new wifi product is plugged in, the wifi indicator LED will start blinking slowly. If the wireless product is already configured to connect to a wifi network, the LED will light solid (connected) or blink rapidly (not connected).

setup for PC users

1. Download the free DTS Play-Fi app from https://play-fi.com/apps/windows
2. If using a wifi connection, for optimal setup conditions place your wireless product next to your wireless router. The wireless product can be moved to its final location after wifi setup.
3. If using a wifi connection, plug your wireless product into an electrical outlet and press the Power button. The wifi indicator LED will start blinking for 20 seconds while your wireless product boots up. This is the first time your new wifi product is plugged in, the wifi indicator LED will start blinking slowly. If the wireless product is already configured to connect to a wifi network, the LED will light solid (connected) or blink rapidly (not connected).

Lights 1. Press and hold the WiFi Setup button until you hear a tone. After a few seconds the WiFi indicator LED will blink twice in continuous intervals to indicate the WiFi mode. At any time you can press the WiFi Setup button again to cancel the setup mode.
2. Press the button until you hear a tone. The WiFi indicator LED will start blinking for 20 seconds while your wireless product boots up. If after a minute the LED continues to blink rapidly, stop and try again. 3. Connect your Android device to your wireless product. 4. Launch the DTS Play-Fi app. Upon launching, the app will automatically detect your wireless product and prompt you to name it.

Lights 1. If the wifi product's wireless indicator LED is not blinking slowly, press and hold the WiFi Setup button for 8 seconds until you hear two tones—one at 3 seconds and another at 8 seconds. After 20 seconds, the wifi indicator LED will begin blinking slowly to indicate Access Point mode is ready. At any time you can press the WiFi Setup button again to cancel the setup mode.
2. Launch the DTS Play-Fi app. The app will automatically find your wireless product and provide prompts for setup.
3. Touch the "Setup" button on the screen.
4. Enter the password for your wireless network, the app will connect your wireless product to your network.
5. Your wireless product is now connected. You may rename it using the app.

Lights 1. If the wifi product's wireless indicator LED is not blinking slowly, press and hold the WiFi Setup button for 8 seconds until you hear two tones—one at 3 seconds and another at 8 seconds. After 20 seconds, the wifi indicator LED will begin blinking slowly to indicate Access Point mode is ready. At any time you can press the WiFi Setup button again to cancel the setup mode.
2. Make sure your iOS device's WiFi is turned on and connected to your WiFi network.
3. Open your iOS device's Settings app and go to the WiFi menu. Your wireless product will show up under the heading "SET UP NEW AIRPLAY SPARK...".
4. Select your iOS device's WiFi on the list. You will have "PlayFi" in the name.
5. Once "Access WiFi Setup" menu appears, you will be prompted to select your WiFi network and name your speaker (you will not need to enter your network password).
6. Once your wireless product is connected, you will notice the WiFi indicator LED change from blinking to solid. This may take up to a minute. If after a minute, the LED continues to blink rapidly, stop and try again.
7. Your wireless product is now connected.
